

ABSTRACT

The present invention relates to a video game adapter system for housing a home video game system and its required monitor or television, and converting to at least one arcade style feature. Multiple game systems can be housed within the cabinet to allow for even a greater variety of games to be played. Additionally, other audio-visual components may be housed within the cabinet of the present invention such as, for example, a Digital Video Disc ("DVD") player, Compact Disc ("CD") player, radio receiver, VCR, and/or an audio cassette player to make the cabinet into a full range entertainment center. The invention allows multiple game systems to be connected simultaneously to a universal control device, game systems and games can be selected quickly and easily.
